

## Teams of Two - Pond Survey

Work together studying the pond. Try to identify as many of the different types of pond life pictured below that you can.

As you find examples of each type of pond life you each then have a vital role in recording your work:

- **Author:** Write a brief description of each organism you find. Explain what it is doing and any relationship you see between it and other forms of pond life (for example, a tadpole might be eating a dragonfly larva).
- **Artist:** Make a sketch the organism in relation to other life in the pond.
